Capstone Project for CSC325

What is ExpenseManager?

ExpenseManager is a free tool for the desktop that manages your finances with the power of a database.

Utilizing Firebase and the popular Java programming language, ExpenseManager gives you advanced options with a simple and easy to understand interface. You can add your own user profile, and it's stored on our end so you can easily access your information anytime, anywhere.

Best of all? It's free and open source, meaning it's always being improved. What's not to love?

How does it work?

Working with ExpenseManager couldn't be easier.

Lorem ipsum docet (write about functionality here)
